## INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No.

PCT/US 03/36952

i.	<b>Basis</b>	of the	report
----	--------------	--------	--------

1. With regard to the **elements** of the international application (Replacement sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this report as "originally filed" and are not annexed to this report since they do not contain amendments (Rules 70.16 and 70.17)):

	Des	Description, Pages					
	1-12	2	as originally filed				
	Cla	ims, Numbers					
	1-8		received on 14.02.2005 with letter of 07.02.2005				
	Dra	wings, Sheets					
		0-40/40	as originally filed				
2.	Witl lang	With regard to the <b>language</b> , all the elements marked above were available or furnished to this Authority in the language in which the international application was filed, unless otherwise indicated under this item.					
	These elements were available or furnished to this Authority in the following language: , which is:						
		the language of a tra	anslation furnished for the purposes of the international search (under Rule 23.1(b)).				
		the language of pub	lication of the international application (under Rule 48.3(b)).				
		the language of a tra Rule 55.2 and/or 55.	anslation furnished for the purposes of international preliminary examination (under 3).				
3.	Witl inte	h regard to any <b>nucle</b> rnational preliminary	eotide and/or amino acid sequence disclosed in the international application, the examination was carried out on the basis of the sequence listing:				
		contained in the inte	rnational application in written form.				
		filed together with th	e international application in computer readable form.				
		furnished subsequer	ntly to this Authority in written form.				
		furnished subsequer	ntly to this Authority in computer readable form.				
		The statement that t in the international a	the subsequently furnished written sequence listing does not go beyond the disclosure application as filed has been furnished.				
		The statement that t listing has been furn	the information recorded in computer readable form is identical to the written sequence ished.				
4.	The	amendments have r	resulted in the cancellation of:				
		the description,	pages:				
		the claims,	Nos.:				
		the drawings,	sheets:

#### Re Item V

Reasoned statement with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

Reference is made to the following document:

D1: US-A-5320552

The document D1 is regarded as being the closest prior art to the subject-matter of claim 1 and shows (the references in parentheses applying to this document):

A memory card connector (see figure 11) comprising an insulative housing (63) with a plurality of contacts (8) and a cover (64) with guide means (90) for receiving the memory card. A pivot-detent mechanism is mounted between the cover and the housing comprising a pivot projection (89) on the cover to mount the cover for pivotal movement between an open position to allow the memory card to be received and a closed position bringing the contacts of the memory card in contact with the contacts (8) of the housing (see figure 11-20; column 5, line 10 - 50). Detent means (344) for receiving the pivot projections (89) allow the cover to slide from a closed position to a latched position (see figures 21-24; column 5, line 51 - 63). The cover (64) has a pair of spring arms (68) which carry the pivotdetent mechanism (see figure 11).

The subject-matter of claim 1 differs from this known document D1 in that the cover is stamped and formed of sheet metal material and the spring arms are resilient to self-bias the pivot projections thereon into the pivot sockets.

The subject-matter of claim 1 is therefore new (Article 33(2) PCT).

The problem to be solved by the present invention may be regarded as how to increase the workability of the cover in a memory card connector.

The solution to this problem proposed in claim 1 of the present application is considered as involving an inventive step (Article 33(3) PCT) for the following reasons: the cover is stamped and formed of sheet metal material and the spring arms are resilient to self-bias the pivot projections thereon into the pivot sockets. Thereby the cover is better suited for frequent use than the cover disclosed in the prior art. None of the cited documents discloses such a solution.

### **INTERNATIONAL PRELIMINARY**

International application No. PCT/US 03/36952

**EXAMINATION REPORT - SEPARATE SHEET** 

Claims 2-8 are dependent on claim 1 and as such also meet the requirements of the PCT with respect to novelty and inventive step.

Claims 1-8 are industrially applicable.

# JC20 Rec'd PCT/PTO 1 9 MAY 2005

1 4. 02. 2005

96)

PCT/US2003/036952 A3-205 PCT Amended 07 February 2005

#### **CLAIMS**

1. A memory card connector (1) for receiving a memory card (2) having a plurality of conductive contacts (2a), comprising:

an insulating housing (4);

a plurality of conductive terminals (16) mounted on the housing;

a cover (6) having receptacle means (6f) for receiving the memory card;

and

a pivot-detent mechanism (8) operatively associated between the cover and the housing and movably mounting the cover to the housing, including

pivot means (12,18) comprising a pivot socket (18) in one of the cover (6) and housing (4) for receiving a pivot projection (12) on the other of the cover and the housing, engageable between the cover (6) and the housing (4) to mount the cover for pivotal movement between an open position to allow the memory card (2) to be received on the cover and a closed position bringing the contacts (2a) of the memory card into engagement with the terminals (16) on the housing, and

detent means (12,20) including a detent socket (20) separate from and independent of said pivot socket (18) for receiving said pivot projection, engageable between the cover and the housing (4) to allow the cover (6) to slidably move from said closed position to a latched position, a portion (12) of said pivot means (12,18) providing a dual function of forming a portion (12) of said detent means (12,20),

wherein said housing (4) is generally flat and mounts the terminals (16) in a generally side-by-side array and includes a pair of mounting portions (4c) at opposite sides thereof, and said cover is generally flat and the receptacle means includes a mouth (6f) at one end of the cover for insertion of the memory card (2) thereinto, the cover having a pair of spring arms (10) at an opposite end thereof and juxtaposed alongside said pair of mounting portions (4c) of the housing, said pivot-detent mechanism (8) being operatively associated between the mounting portions (4c) of the housing and the spring arms (10) of the cover,

and wherein said cover (6) is stamped and formed of sheet metal material, and said spring arms (10) are resilient to self-bias the pivot projections (12) thereon into the pivot sockets (18) and the detent sockets (20) in the mounting portions (4c) of the housing (4).

PCT/US2003/036952 A3-205 PCT Amended 07 February 2005

- 2. The memory card connector of claim 1 wherein the detent sockets (20) define the latched position of the cover.
- 3. The memory card connector of claim 1 wherein said detent projections (12) are generally cone-shaped.
- 4. The memory card connector of claim 2 wherein the detent sockets (20) are located rearwardly of the pivot sockets (18).
- 5. The memory card connector of claim 1 wherein the detent sockets (20) are semi-conical.
- 6. The memory card connector of claim 1 wherein said cover (6) includes a cover plate (6a) spanning an area between said spring arms (10) and a pair of side walls (6b) defining opposite sides of said receptacle means (6f).
- 7. The memory card connector of claim 6, including latch means (6c,24a) between the side walls (6b) of the cover (6) and opposite sides of the housing (4) and automatically engageable when the cover slides to said latched position.
- 8. The memory card connector of claim 7 wherein said latch means comprises latching flanges (6c) formed inwardly from said side walls (6b) of the cover (6) and slidable under latching flanges (24a) at opposite sides of the housing (4) when the cover slides to said latched position.
